TECHNICAL SKILLS

Languages: Java, SQL, JavaScript, TypeScript, HTML, CSS

Backend: Spring, Spring Boot, Spring MVC, REST APIs, Spring Data JPA, Hibernate, Spring Security, JWT

Frontend: React.js, React Router, Redux Toolkit, Tailwind CSS

Databases: MySQL, PostgreSQL, H2

Architecture: Microservices, Saga Pattern, Database-per-Service, Redis

Cloud/DevOps: AWS, Docker, Docker Compose, Kubernetes

Tools & Testing: Git, GitHub, Maven, Postman, JUnit 5

EXPERIENCE

•HCLTech

September 2025 – Present

Graduate Engineer Trainee (GET)

Bengaluru, Karnataka

- Completed structured Java Full Stack training covering Core Java, Object-Oriented Programming, Collections, Java 8+ features, Spring, Spring Boot, REST APIs, SQL, JPA/Hibernate, Spring Security, React, Git, Maven, testing, Docker and cloud fundamentals (AWS).
- Applied Java Full Stack concepts through hands-on training and application development, strengthening skills in Spring Boot, REST APIs, database integration, React, debugging and testing.

PROJECTS

•EventNexus

Microservices-based event ticketing platform with authentication, event management, ticketing, payments and notifications.

- Developed five Spring Boot microservices for authentication, event management, ticketing, payments and notifications using Java 21, React, TypeScript and PostgreSQL.
- Implemented JWT-based authentication and role-based authorization using Spring Security, with validation, sanitization and service-to-service authentication.
- Designed a Saga-based ticket purchase workflow covering ticket reservation, order creation, payment processing, ticket generation and notification, with compensation handling for failures.
- Integrated Redis caching and database-per-service architecture, and containerized services using Docker Compose.

•VaultFlow

Full-stack digital banking application supporting account management, RTGS and NEFT fund transfers.

- Developed a banking application using Java 17, Spring Boot, React, MySQL, Spring Security and JPA/Hibernate with RESTful APIs.
- Implemented JWT-based authentication and authorization with protected APIs and a layered Controller–Service–Repository architecture.
- Implemented transaction safeguards including idempotency, duplicate-transaction detection, balance validation, fraud checks and audit logging, with scheduled NEFT batch settlement.
- Implemented transaction processing with rollback handling and searchable, paginated transaction history.

•NetPulse

Core Java job scheduling and execution system with concurrent processing, retries and persistence.

- Developed a Java 21 job scheduling system using ExecutorService, ScheduledExecutorService, BlockingQueue and PriorityBlockingQueue for concurrent and priority-based job execution.
- Implemented scheduling, worker-pool execution, pause/resume, cancellation and job dependencies with cycle detection and topological ordering.
- Implemented automatic retries with exponential backoff and Dead Letter Queue handling for failed jobs.
- Added file-based job persistence and restart recovery using the Repository pattern, with JUnit 5 testing.

CERTIFICATIONS

•**Spring Boot Certification:** GUVI (HCL) — Java backend development, Spring Boot and REST APIs

•**React.js Certification:** GUVI (HCL) — Component-based UI development with React.js

•**AWS Cloud Computing:** GUVI (HCL) — AWS fundamentals and core cloud services

EDUCATION

•**B.E. in Computer Science and Engineering**

2021 - 2025

JSS Academy of Technical Education, Bengaluru

CGPA: 8.55
